

LAB SET-UP - Managing Ansible with Red Hat Ansible Tower

INTRODUCTION

The Pluralsight course *Managing Ansible with Red Hat Ansible Tower* includes a number of demos, which gives you an opportunity to practice the skills you are learning in the course presentations. This guide focuses on the steps needed to set up a lab for the purposes of this course.

You can access the following resources to do your own setup if desired:

<https://access.redhat.com/products/red-hat-enterprise-linux>
https://access.redhat.com/documentation/en-us/red_hat_enterprise_linux/7/html/installation_guide/index
https://docs.ansible.com/ansible/latest/installation_guide/intro_installation.html
<https://docs.ansible.com/ansible-tower/latest/html/quickinstall/index.html>
<https://www.ansible.com/license>

What is the lab environment?

- RHEL 7.2 needed for Tower
- Python 2.7+ or Python 3.5+
- Ansible 2.9
- Tower 3.6

Note: Red Hat will not be providing support for lab setup.
